Established by the European Commission

The project has received funding from the European Research Council under the European Union Horizon Europe Research and Innovation Programme (GA n. 101041596 ERC – Polyphonic Philosophy)

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union. Neither the European Union nor the granting authority can be held responsible for them

What is a geographical entity?

There are different ways to represent a domain  
(of interest)

There can be multiple, equally valid and  
overlapping perspectives on a domain

A perspective is an act of cognitively partitioning  
a domain, an act that draws a mental division  
between those entities upon which we are  
focusing on and those which fall outside our  
(domain of) interest

ISOs can potentially represent any domain

different ISOs can represent either the same domain or  
different domains

no way to represent a domain is in principle excluded

any domain can be represented by adopting multiple,  
equally valid and overlapping perspectives

a representation provides a perspective on a domain

not all perspectives are necessarily veridical and/or  
effective representations of a domain. (Some of them can  
be veridical and/or effective for some but not for others)

a perspective (also) is involved in outlining a domain

every perspective (cognitively) partitions a domain into  
different entities

no way to partition a domain is in principle excluded

no entity is in principle excluded from or included in the  
partitioning

ISOs' development

(entities, partitioning, systematizing,  
representational primitives)

ISOs' design

(procedural approaches, principles, languages)

*That's all Folks!*
