## Empowering Humanities Research

DiPText-KC provides scholars with state-of-the-art digital tools, resources, and guidance. We bridge **traditional** research and **digital** innovation, enabling effective use of **text encoding**, **data modeling**, and **computational instruments**. We aim to empowering humanities research with digital methodologies that enhance both **individual** and **collaborative** projects.

## Seminars, Summer Schools, Tailored Training and Personalized Guidance

DiPText-KC offers specialized workshops and seminars or contributes to summer schools focused on digital skills like text encoding, data modeling, and digital editing. Our **training programs** are designed for **scholars at all levels**, providing practical, hands-on experience with tools that enhance research. We also offer **personalized guidance**, ensuring that each participant receives support tailored to their specific project needs, helping them integrate digital methods effectively into their work.

Processing of Allographic Texts

Training School 2023

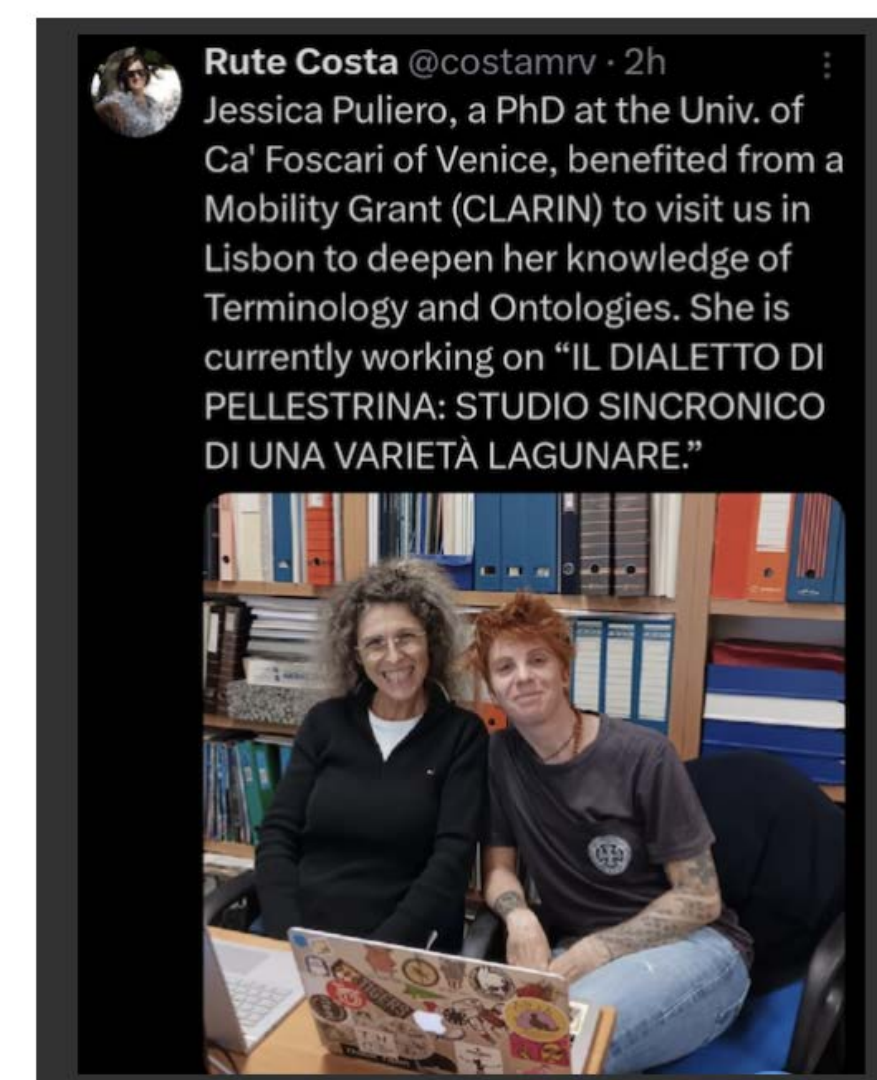

## Integrating Digital Tools into Research

PhD students at DiPText-KC are trained in essential tools like eScriptorium for **handwritten text recognition**, XML-TEI editors for **digital text encoding**, or Euphoria for text annotation through **domain-specific languages**.

## Supporting grant proposal preparation

DiPText-KC specifically helps students prepare for grant proposals, such as CLARIN **mobility grants**, by guiding them through the application process, **refining** project proposals, and ensuring **alignment with CLARIN's objectives**. We offer feedback on how to effectively present the use of digital tools and collaboration opportunities within the CLARIN infrastructure, increasing the chances of a successful grant application.
